KRETZMANN DECL. ISO PLAINTIFFS' REPLY BRIEF

#### **DECLARATION OF HOLLIN KRETZMANN**

I, Hollin Kretzmann, declare:

- 1. I am a staff attorney employed by the Center for Biological Diversity ("Center") and act as counsel for the organization in this action. I am admitted to practice law in California. I make this declaration based on my own personal knowledge and, if called upon to testify, could and would do so competently.
- 2. Exhibit A attached hereto is a copy of a July 15, 2015 joint letter from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources ("DOGGR") and the California State Water Resources Control Board to the U.S. Environmental Protection Agency ("EPA"), Region IX, available on the California Department of Conservation's official website at <a href="mailto:ftp://ftp.consrv.ca.gov/pub/oil/UIC%20Files/July%2015%202015%20US%20EPA%20Deliverable.pdf">ftp://ftp.consrv.ca.gov/pub/oil/UIC%20Files/July%2015%202015%20US%20EPA%20Deliverable.pdf</a> (last accessed June 29, 2016). Under my direction and control, a true and correct copy of this document was attached to this Declaration as Exhibit A.
- 3. Exhibit B attached hereto is a copy of an April 19, 2016 letter from EPA Region IX's Michael Montgomery to DOGGR's Kenneth Harris, Jr., available on EPA's official website at <a href="https://www.epa.gov/sites/production/files/2016-05/documents/epa-letter-to-doggr-inforequest-ag-ae-swrcb-doggr-2016-04-19.pdf">https://www.epa.gov/sites/production/files/2016-05/documents/epa-letter-to-doggr-inforequest-ag-ae-swrcb-doggr-2016-04-19.pdf</a> (last accessed June 29, 2016). Under my direction and control, a true and correct copy of this document was attached to this Declaration as Exhibit B.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

DATED: June 29, 2016

Hollin Refiner

#### DEPARTMENT OF CONSERVATION

Managing California's Working Lands

DIVISION OF OIL, GAS, & GEOTHERMAL RESOURCES

July 15, 2015

Mr. Michael Montgomery
United States Environmental Protection Agency – Region IX
75 Hawthorne Street
San Francisco, CA 94105-3901

#### Dear Mr. Montgomery:

We are continuing to forge through our review of the status of active injection wells, receive operator information concerning aquifer exemption proposals, and work on several other agreed tasks necessary to update California's Class II underground injection program.

As part of this ongoing effort, we agreed to submit the following to you by today: (1) a preliminary assessment of whether data currently supplied to us demonstrates that each of the aquifers historically treated as exempt presently meets the criteria for an aquifer exemption; (2) a plan and timeframe for addressing the closure of those injection wells for which there is insufficient evidence that the zone of injection meets the criteria for an aquifer exemption; (3) a detailed plan for Class II program improvements; and (4) an outline of our intended course of action for obtaining public comment on our aquifer exemption communications.

Each of these items is addressed, in turn, below. We conclude with updates on a variety of related items.

#### 1. Preliminary Assessment of 11 Aquifers Historically Treated As Exempt

Attachment 1 to this letter is the Division's *Preliminary Assessment of Eleven Aquifers Historically Treated As Exempt.* It discusses, by field and formation, the following information for each aquifer: (1) the number and location of injection wells; (2) the concentration, in milligrams per liter, of total dissolved solids (TDS) that is representative for each aquifer; (3) the TDS of the injected fluids for each aquifer; (4) the depth of injection historically; and (5) volumes injected since 1983, in barrels.

One of the eleven aquifers, the undifferentiated aquifer in Wild Goose Field, may have TDS in excess of 10,000 mg/L. If so, it would not be considered a USDW and thus would require no evaluation at this juncture. As for the remaining aquifers, the Division's preliminary assessment is that most or all may not meet the criteria for an

Mr. Michael Montgomery July 15, 2015 Page 2

aquifer exemption. Currently available information indicates that, aside from the undifferentiated aquifer in Wild Goose Field, the aquifers contain between 400 and 3,325 mg/L total dissolved solids, and are found at depths as shallow as 200 feet and not deeper than 3,000 feet. However, there are residual water quality questions to be resolved concerning these aquifers that may support exemptions, and we are continuing to work with operators to resolve data gaps.

Five of the eleven aquifers appear to have no wells actively injecting. The Division believes it is unlikely that any operator will endeavor to collect and present new information regarding those aquifers. The Division will likely conclude its evaluation of those aquifers sooner than it will for the aquifers in which injection is occurring. We will continue to be in regular communication and provide you with updates on our progress as we go.

The Division has been in communication with the operators that have injection wells in these aquifers to see if they have any additional information that would support a determination that an aquifer, or part of an aquifer, meets the aquifer exemption criteria. Although the Division has yet to receive complete information supporting such a determination, the Division believes it is likely that it will be receiving such information for at least one of the 11 aquifers. If information is in fact presented that the Division and State Water Board agree would support a determination that an aquifer, or part of an aquifer, meets the criteria for exemption, the Division will conduct a public process, including a joint hearing with the State Water Board. It will then submit its final determination to U.S. EPA.

Likewise, if it becomes clear that operators cannot provide information that supports a determination that an aquifer meets the criteria for exemption, the Division will deem its evaluation complete for that aquifer. At that point, the Division will issue public notice proposing a determination that the aquifer fails to meet the criteria for exemption, and allow for public comment on that proposed determination. After completing the public participation process, the Division will submit its final determination to the U.S. EPA and request that it take appropriate action as to the exempt status of that aquifer.

2. <u>Plan and Timeframes for Addressing the Closure of Injection Wells for Which</u>
<u>There Is Insufficient Evidence That the Receiving Aquifer Meets the Criteria for an</u>
Aquifer Exemption

Under the plain language of our emergency regulations and proposed permanent regulations, improper injection activity must end by the relevant deadline agreed to by our respective agencies unless the activity is within a duly-approved aquifer exemption. We fully intend to adhere to the timeframes created by these regulations. Where no exemption is obtained going forward, either because exemption criteria are not met, or because the submittal of relevant data did not occur in time for any of the

Mr. Michael Montgomery July 15, 2015 Page 3

three involved agencies to reasonably act, such injection must end until an appropriate exemption is obtained. (Cal. Code Regs., Tit. 14, §§ 1760.1, 1779.1.)

If an affected operator fails to obtain an aquifer exemption by the relevant time, the operator would be in violation of the regulations, and be subject to a notice of violation and order to comply, as warranted.

Of course, injection wells can be, and have been, shut in prior to the applicable deadline under our regulations. As you know, we have been focusing our energies on identifying wells in proximity to waters of beneficial use before widening our review to other wells, and have obtained the shut in of 23 wells to date, either by order or by agreement with the operator. We are continuing to review wells in potential proximity to beneficial uses and will obtain permit relinquishments or issue shut-in orders as warranted.

#### 3. Detailed Plan for Class II Program Improvements

The Division's current plan to address UIC Program improvements, including actions taken to date, a project by project review, rulemaking, training, monitoring and compliance and other activities is set forth in Attachment 2 to this letter, *Plan for Class II Improvements*.

#### 4. Public Participation in Aguifer Exemption Process

Though not explicitly required at this juncture, in Attachment 3 to this letter, *Public Participation Process For Aquifer Exemption Proposals*, we generally describe for you our intended course of action for providing interested members of the public with notice of, and an opportunity to comment upon, our intention to recommend an exemption or state that exemption criteria have been met in a given case.

#### 5. Other Matters

In our discussions, we agreed to a "soft" or "target" deadline of July 15 for the State to submit to you all applications for aquifer exemptions for wells scheduled to be shut in by October 15, 2015. As we recently discussed with you, to date we have not received adequate data to prepare an aquifer exemption application for the aquifers associated with this deadline.

Once we finish our work with those operators who submit packages, the packages will be circulated to the State Water Board and other interested administration officials. If there is agreement that an aquifer exemption application should go forward, the application will be scheduled for a 30 day notice and public comment period before it is finally sent to your agency for a final determination.

Mr. Michael Montgomery July 15, 2015 Page 4

As we recently confirmed to you, we have made it clear to the operators in workshops and in our regulations that (1) the earlier their data packages get to us, the more likely they will be to obtain a final determination from US EPA prior to any deadline to shut in certain classes of wells, and (2) that where no exemption is obtained by the deadline, operations must be shut in.

We trust you will contact us with any questions or concerns, and we look forward to our further discussions of the process as we work together to improve California's Class II program.

Sincerely,

Sincerely,

Steve Bohlen State Oil and Gas Supervisor

Prelin	ninary Assessment	p. 4
	Aquifers by field:formation	
	South Tapo Canyon: Pico	p. 5
	Blackwell's Comer: Tumey	p. 7
	Kern Bluff: Kern River	p. 10
	Kern Front: Santa Margarita	p. 14
	Kern River: Chanac	p. 18
	Kern River: Santa Margarita	p. 22
	Mount Poso: Walker	p. 26
	Round Moutain: Olcese	p. 37
	Round Mountain: Walker	p. 48
	Bunker: Undifferentiated	p. 59
	Wild Goose: Undifferentiated	p. 62

# **Executive Summary**

The Division of Oil, Gas and Geothermal Resources has made a preliminary evaluation of whether current data support a determination that the eleven aquifers historically treated as exempt currently meet the criteria for an aquifer exemption.

The eleven aquifers historically treated as exempt, and significant relevant data for each, are as follows:

1,000'

• The South Tapo Canyon field - the Pico formation (no longer being used);

Injection Wells: 0 TDS: 1,900 ppm NaCl Depth: 0-

• The Blackwell's Corner field - The Tumey formation (no longer being used);

Injection Wells: 0 TDS: 2,100 -2,600 mg/l Depth: 945' - 1,473'

• The **Kern Bluff** field – the **Kern River** formation (no longer being used);

Injection Wells: 0 TDS: 400 – 900 mg/l Depth: 0- 200'

• The Kern Front field – the Santa Margarita formation;

Injection Wells: 13 TDS: 460 – 2,318 mg/l Depth: 2,197' – 2,840'

• The Kern River field -the Chanac formation;

Injection Wells: 12 TDS: 926 – 3,325 mg/l Depth: 425' – 1,335'

• The Kern River field – the Santa Margarita formation;

Injection Wells: 32 TDS: 490 – 1,584 mg/l Depth: 760' – 2,285'

• The **Mount Poso** field – the **Walker** formation;

Injection Wells: 5 TDS: 1,069 mg/l Depth: 1,740' – 1,796'

• The **Round Mountain** field – the **Olcese** formation;

Injection Wells: 6 TDS: 2,693 mg/l Depth: 710' – 850'

• The **Round Mountain** field - the **Walker** formation;

Injection Wells: 30 TDS: 2,335 mg/l Depth: 1,890' – 2,590'

• The **Bunker Gas** field - **all aquifers** within the field that are not in a hydrocarbon producing zone (no longer being used);

Injection Wells: 0 TDS: 1,215 mg/l Depth: 3,000'

• The **Wild Goose** field - **All aquifers** within the field that are not in a hydrocarbon producing zone (no longer being used);

Injection Wells: 0 TDS: 2,800 -5,000\* mg/l Depth: 2,700' - 3,400'

\*More recent analysis indicate TDS around 24,000 mg/l

# Key portions of the above data, in spreadsheet form:

				quifers Snapshot		
Field	Formation	Number of Active Injection Wells	Total Dissolved Solids of Formation	Total Disolved Solids of Injected Fluid	Depth	Historic Volumes Injected Since 1983 Barrels
South Tapo Canyon	Pico	0	1,900 ppm NaCl	600 ppm NaCl	1,000'	0
Blackwell's Corner	Tumey	0	2,100 - 2,600 mg/l	29,000 ppm NaCl	945' - 1,475'	2,425
Kern Bluff	Kern River	0	400 - 900 mg/l	600 mg/l	200	5,816,190
Kern Front	Santa Margarita	13	460 - 2,318 mg/l	360 - 6,400 mg/l	2,197' - 2,840'	151,820,215
Kern River	Chanac	12	926 -3,325 mg/l	491 - 2,000 mg/l	425' - 1,335'	568,987,463
Kern River	Santa Margarita	32	490 - 1,584 mg/l	491 -74,924 mg/l	760' - 2,285'	799,041,272
Mount Poso	Walker	5	1,069 mg/l	650 mg/l	1,740' - 1,796'	63,777,556
Round Moutain	Olcese	6	2,693 mg/l	1,900 mg/l	710' - 850'	160,798,008
Round Mountain	Walker	30	2,335 mg/l	1,600 - 2,900 mg/l	1,890' - 2,590'	1,529,910,014
Bunker	Undifferentiated	0	1,215 mg/l	10,675 - 11,025 ppm Chloride	3,000'	51,454
Wild Goose	Undifferentiated	0	24,349 mg/l	24,349 mg/l	2,700' - 3,400'	0

#### Division of Oil, Gas, and Geothermal Resources

# Preliminary Assessment of Eleven Aquifers Historically Treated as Exempt July 15, 2015

The US EPA, State Water Board, and the Division have agreed that the State will submit an evaluation of each of the 11 Historically Treated as Exempt (HTAE) aquifers with a preliminary assessment as to whether current data would support a determination that the criteria for an aquifer exemption are met.

11 HTAE aguifers historically treated as exempt are as follows:

- The **Pico** formation within the boundaries of the **South Tapo Canyon** field (no longer being used);
- The **Tumey** formation within the boundaries of the **Blackwell's Corner** field (no longer being used);
- The Kern River formation within the boundaries of the Kern Bluff field;
- The Santa Margarita formation within the boundaries of the Kern Front field;
- The **Chanac** formation within the boundaries of the **Kern River** field;
- The **Santa Margarita** formation within the boundaries of the **Kern River** field;
- The Walker formation within the boundaries of the Mount Poso field;
- The Olcese formation within the boundaries of the Round Mountain field;
- The Walker formation within the boundaries of the Round Mountain field:
- All aquifers within the Bunker Gas field that are not in a hydrocarbon producing zone and that have groundwater that has less than 10,000 TDS (no longer being used); and
- All aquifers within the Wild Goose field that are not in a hydrocarbon producing zone and that have groundwater that has less than 10,000 TDS (no longer being used).

More detail on each aguifer is set out below.

#### South Tapo Canyon Field, Pico Zone, Ventura District

Number of disposal wells permitted in the zone:

#### 2) Number of active producers:

n

#### 3) Depth of the zone across the field:

At the surface on the south side of the field to 1,000 ' below surface depth on the north side. There are opposing thrust faults therefore, there is a wide range in zone depth across the field. Zone dips to the north across the field. This is based on the data sheet.

#### 4) Volumes Injected Historically since 1983:

None. District confirmed that there is no documentation that injection ever historically occurred in the Pico zone. The 5/17/1985 EPA letter contradicts this and indicates that injection did occur starting in 1948 and 1,903,000 Bbls was historically injected in this zone.

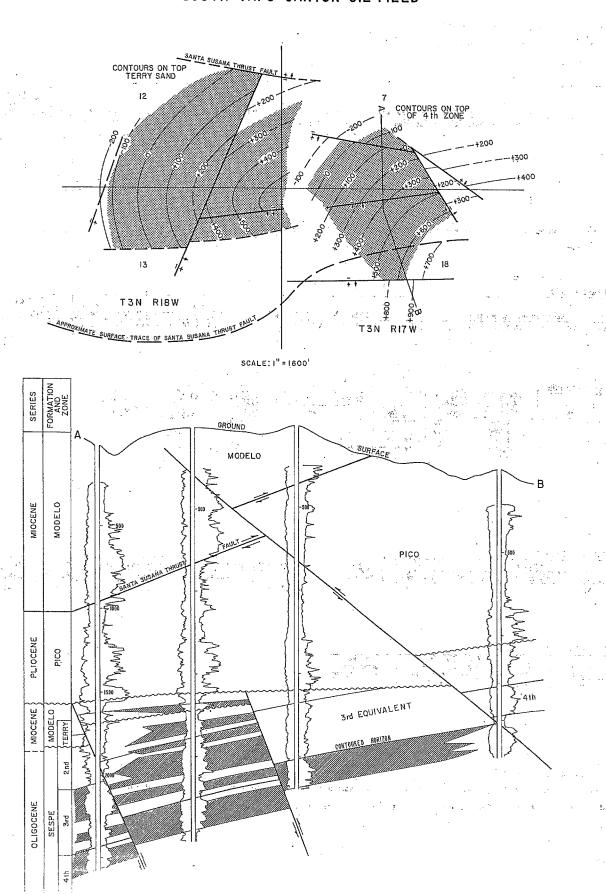

#### 5) TDS of zone:

1,900 ppm NaCl according to 5/17/1985 EPA letter

#### 6) TDS of injection water:

600 ppm NaCl according to the 5/17/1985 EPA letter

#### SOUTH TAPO CANYON OIL FIELD

Type of project	Date started	Cumulative injection - Water, bbl; Gas, Mcf; Steam, bbl (water equivalent)	Maximum number of wells used for injection
Cyclic-steam	1965	3,701,855	124
Cyclic-Steam	1505	3,701,000	
		1	

SPACING ACT: Applies

BASE OF FRESH WATER: 950

CURRENT CASING PROGRAM: 8 5/8" cem. above zone and across base of fresh-water sands; 6 5/8" liner landed through zone.

METHOD OF WASTE DISPOSAL: Waste water is injected in disposal wells (808,148 bbls. in 1972), steam injection wells, and in unlined sumps where water quality meets Div. of Oil and Gas standards. REMARKS:

REFERENCES: Corwin, C.H., Fern Fluff Cll Field: Calif. Div. of Oil and Gos, Summery of Operations--Calif. Oil Fields, Vol. 36, No. 1 (1980).

#### Kern Front Field, Santa Margarita Zone, East Side Bakersfield District

Number of disposal wells permitted in the zone:
 13

#### 2) Number of active producers:

C

#### 3) Depth of the zone where the injection wells are located:

2,197' to 2,840' below surface

#### 4) Volumes injected historically since 1983:

151,820,215 Bbls injected, last injected on 3/1/2015

#### 5) TDS of zone:

#### 460 mg/l - 2,318 mg/l TDS

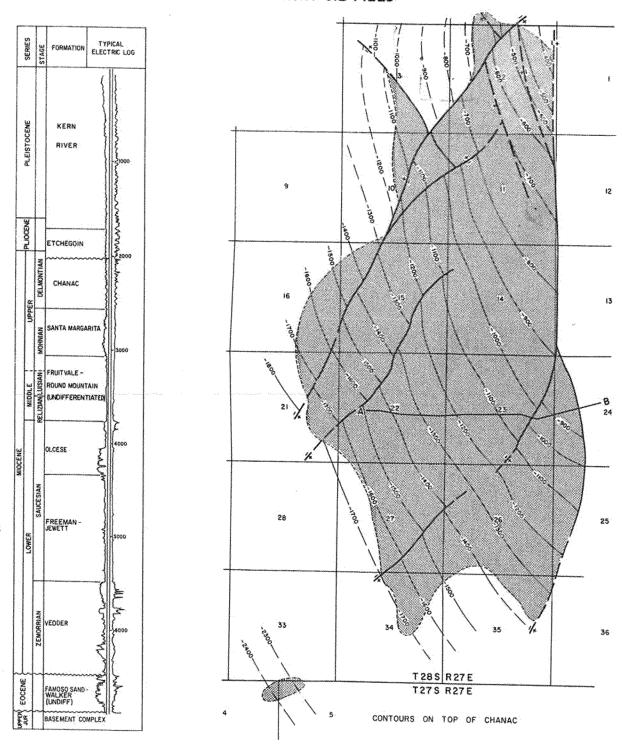

The 460 mg/l TDS sample is from the lower Santa Margarita zone in 4-4W well (029-62979) collected at a depth between 3,425'-3,255' on 12/9/1988 and the 2,318 mg/l TDS sample is from WD#1 (029-54754) well at a depth of 2,300' on 9/17/1975.

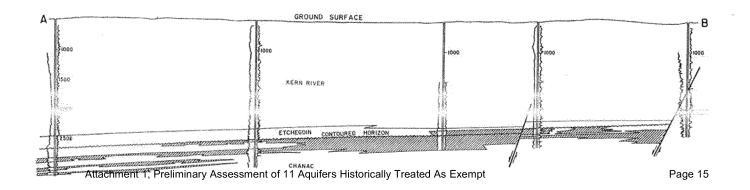

#### 6) TDS of injection water:

#### 360 mg/l - 880 mg/l and 6,400 mg/l TDS.

The 360mg/I TDS sample is from "injection wells "Movius" 3, 2 and D11 on 8/27/2010, the 880 mg/I TDS sample is from well Sec. 27 waste water to "Valley Waste KFF" on 11/2/1997 and the 6,400 mg/I TDS sample is the only high concentration sample collected from "waste water at injection well" on 4/11/2011. The 6,400 mg/I TDS sample is from project #33800012 and is most likely from the cogeneration and scrubber brine waste water. The permitted injection fluids in the Kern Front field, Santa Margarita zone consists of produced water from the Chanac, Etchegoin and Santa Margarita zones and cogeneration and scrubber brines from a plant.

BASE OF FRESH WATER: 1,800

CURRENT CASING PROGRAM: 7" cem. above zone and across base of fresh-water sands; 5 1/2" liner landed through zone.

METHOD OF WASTE DISPOSAL: Evaporation and percolation sumps (to be phased out).

REMARKS: Vedder zone water contains 3 to 4 ppm boron.

REFERENCES:

## Round Mountain Field, Olcese Zone, East Side Bakersfield District

# 1) Number of disposal wells permitted in the zone:

6 (4 wells are permitted in both the Olcese and Walker Zones in Round Mountain Field)

## 2) Number of active producers:

0

#### 3) Depth of the zone where the injection wells are located:

710' to 850' below surface. These zone depths are from wells API #029-18114 and API #029-18119, which are currently injecting in the Olcese zone. The remaining wells in the field (029-47441, 029-47543, 030-51960 and 030-51959) are permitted to inject in the Olcese, Freeman-Jewett, Vedder and Walker but are currently perforated in the Vedder and/or Walker zones only. For these 4 wells there are no logs available that pick the top of the Olcese zone since there is no injection there. Zone is fault bounded 1 ½ miles east of field limits, and pinches out 5 miles west of field limits.

## 4) Volumes injected historically since 1983:

160,798,008 Bbls, last injected on 1/1/2015

## 5) TDS of zone:

## 2,693 mg/I TDS

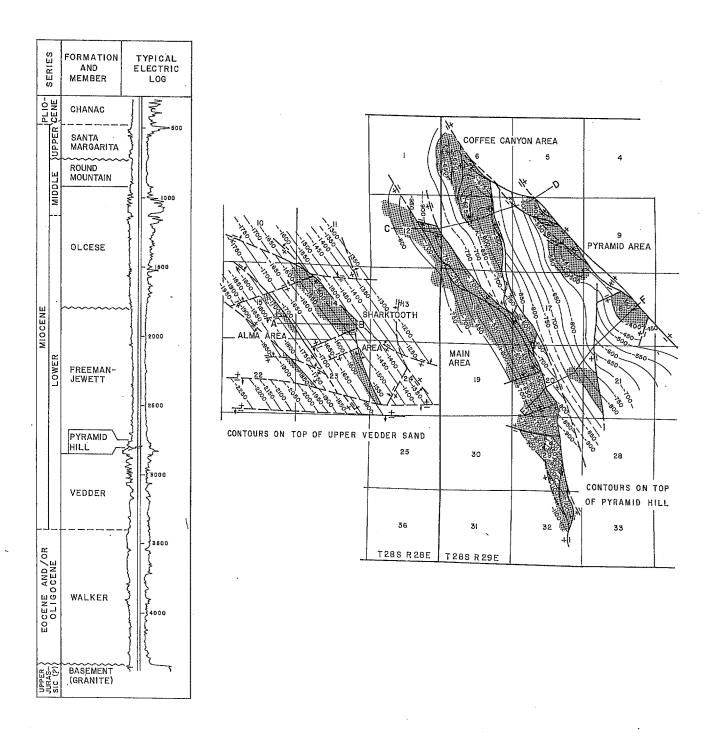

Sample collected from "water from Bishop #6 Bailer Sample at 600" on 4/27/1974.

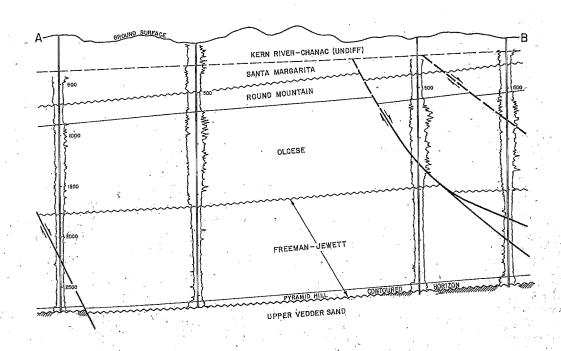

## 6) TDS of injection water:

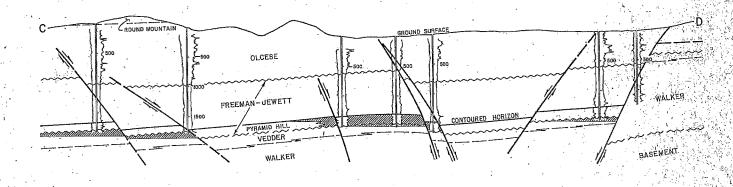

## 1,900 mg/I TDS

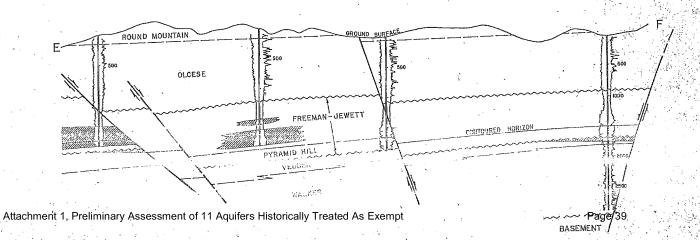

Sample collected from "Sec. 20 produced water" (Olcese WD#342 & 343) on 2/23/2009. Permitted fluids for injection into the Olcese Zone in Round Mountain field consist of Pyramid Hill, Jewett, Freeman-Jewett and Vedder zones.

## Round Mountain Field, Walker Zone, East Side Bakersfield District

#### 1) Number of disposal wells permitted in the zone:

30 (4 of these are permitted in both the Olcese and Walker Zones in Round Mountain Field). There are 2 gas disposal wells.

#### 2) Number of active producers:

4 wells (Note that although this aquifer was historically treated as exempt as a non-hydrocarbon producing formation, the Walker zone within the field has current production.)

# 3) Depth of the zone where the disposal wells are located:

1,890' to 2,590' below surface

## 4) Volumes injected historically since 1983:

1,529,910,014 Bbls, last injected on 3/1/2015

## 5) TDS of zone:

#### 2,335 mg/I TDS

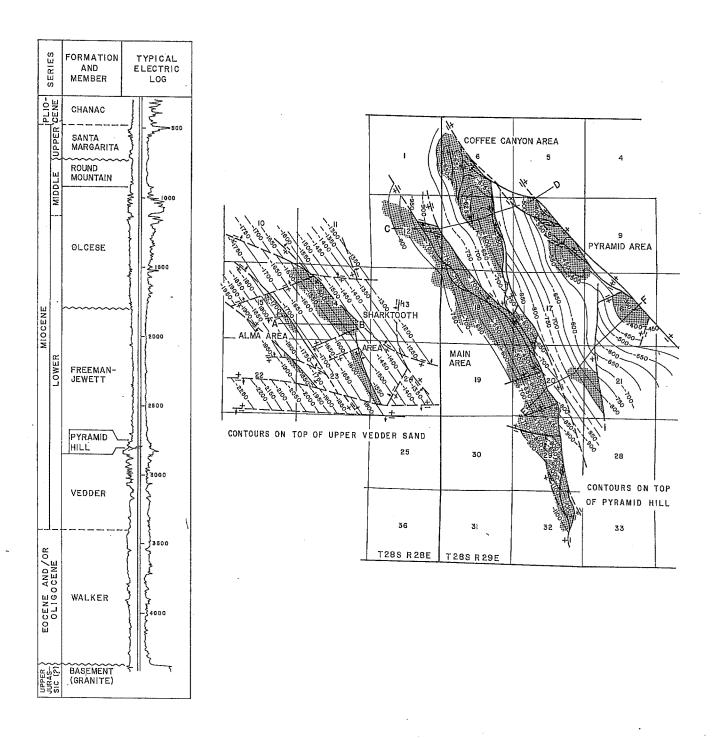

Sample 2,335 mg/l TDS is from "Walker zone formation water" (Round Mountain WD 1-20) on 10/17/1983.

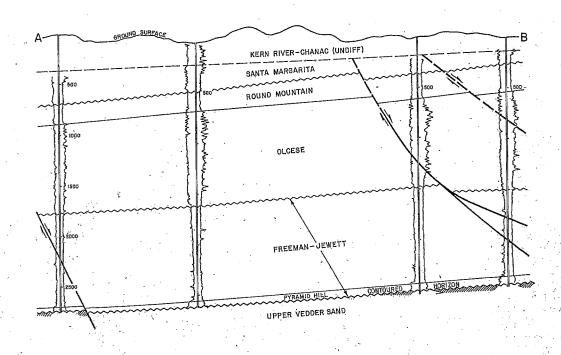

## 6) TDS of injection water:

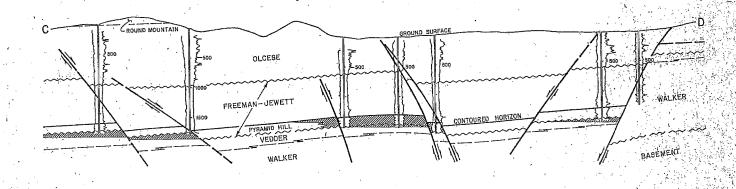

## 1,600 - 2,900 mg/l TDS

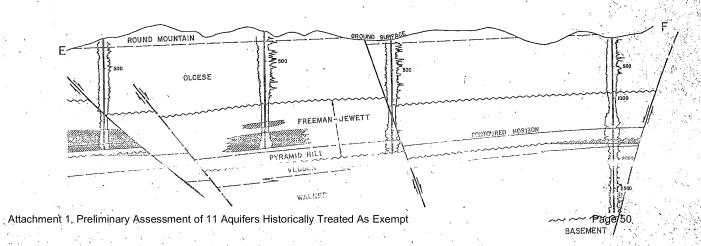

The 1,600 mg/l TDS sample is from "NAM Produced water (West signal #8) on 1/1/2009 and the 2,900 mg/l TDS sample is from "18 -WD7" on 9/20/2012. Permitted fluids for injection into the Walker Zone in Round Mountain field consist of Pyramid Hill, Jewett, Freeman-Jewett and Vedder zones production fluid.

# Attachment 2: Plan for Class II Program Improvements

#### Introduction

Since at least the time of the US EPA's 1983 delegation of primacy to the Division of Oil, Gas and Geothermal Resources (Division), the Division's largest regulatory endeavor has been its Class II underground injection control (UIC) program. Significant improvements to this plan will, by necessity, require significant changes in all aspects of the Division – leadership, staffing, training, data management, establishment of metrics, internal review and monitoring against standards. Organizational change of this magnitude is profound, affecting every employee action every day. The Brown Administration, the Department of Conservation and the Division have committed to this organizational restructuring, of which this Plan for Class II UIC Program Improvements is an important – but not sole – piece.

Given the years of work and level of resources required, it is critical to know what the target is. This plan should be understood in the context of this vision for the Division:

The Division will become a modern, efficient, collaborative, science-driven agency that intelligently and consistently regulates State oil and gas activities using modern field tools integrated with advanced data management systems that allow for oversight of a greater number of activities. Safety and training will become integrated cultural norms. The Division will be much better connected with oil and gas-related research activities in industry, academia, and national laboratories so that it can see regulatory challenges coming in advance and apply regulations from an elevated platform of understanding. The Division will perform its duties with integrated collaboration of other State agencies to reduce the environmental impact of oil and gas development. Internal monitoring and compliance will be routine and fully integrated with all that we do so that Division performance can be measured objectively. The Division will be paperless and have instant access to data and information, and hence be able to support all stakeholder groups. Likewise, stakeholder groups will be able to routinely observe Division activities and retrieve information of interest. The Division will have more effective communications capabilities and be more comfortable engaging stakeholder groups.

#### **BACKGROUND AND OVERVIEW**

Injection wells have been an integral part of California's oil and gas operations for over 50 years. Currently, over 50,000 oilfield injection wells are operating in the state. Injection wells are used to increase oil recovery and to safely dispose of waste fluid produced with oil and natural gas. About 70-75 percent of California's oil production is the result of enhanced oil recovery (EOR) methods such as steam flood, cyclic steam, water flood, and natural gas injection, all of which involve some sort of injection activity.

Most of the oil and gas fields in the state are mature and require EOR to be productive. Each year more responsibility rests with the Division's Underground Injection Control (UIC) Program to deal with the enhanced recovery of the resource. This includes new methods and techniques developed by the industry to produce the oil and gas. The increased use of injection, such as cyclic steaming, also presents new public health and safety risks, especially in fields with older wells. These risks include groundwater contamination, reservoir fluids leaking to the surface, and fires and blowouts caused by the migration of oil and gas. Urban encroachment on or around older oil and gas wells raises additional issues and concerns.

The Horsley Witten audit, conducted at the request of the Division for the US EPA, was completed and sent to the Division in September 2011. The following issues were outlined in the audit:

- Additional plugging and cementing requirements to protect underground sources of drinking water (USDW)
- More in-depth evaluation of the zone of endangering influence (ZEI)
- Requirements for waste fluid disposal
- Changes to requirements for pressure gauges and/or monitoring of zone pressure
- Well construction and cementing
- Annual project reviews
- Standard Annual Pressure Test (SAPT) requirements
- Well monitoring requirements instead of the SAPT
- Mechanical integrity surveys and testing
- Inspections and compliance/enforcement practices and tools
- Idle well planning and testing program
- Financial responsibility requirements
- UIC staff qualifications
- Cyclic steam injection well testing requirements

In addition to the US EPA audit, the legislature has been involved with several UIC issues and has noted other areas that need to be addressed in regulation. These include:

- H2S/Waste Gas Disposal
- Freshwater usage relating to EOR projects
- CO2 EOR Projects

Additional areas of concern relating to the Division's UIC program include:

- Production from shallow diatomite formations
- Surface expressions
- Aquifer exemption process

- Well construction standards
- Injection relating to formation fracturing pressure

#### **ACTIONS TAKEN TO DATE**

The Division first identified issues with its UIC Program in 2009. Division management began a review of then-current practices in regards to approving injection projects, annual project reviews, and the evaluation of wells within the Area of Review (AOR). At the conclusion of the Division's self-assessment, it developed a general plan to work with the administration and Legislature to increase the number of staff so that several deficiencies in the program could be addressed proactively. 17 positions (PYs) established in the FY 2010-2011 budget were spread throughout the Division to add staff to the UIC program to ensure project applications were reviewed according to both the program specifications outline in the Primacy application to the US EPA and in accordance with State statutes and regulations. In addition, Division management also put in place a Letter of Expectations to remove any confusion regarding how injection project applications were to be evaluated. These expectations were issued in May 2010 and revised in November 2010. The Letter of Expectations was mentioned and supported in the Horsley Witten Report.

As the Division continued to monitor its performance and the pace of program improvements, the Division recognized that additional resources were needed to reach improvement goals and therefore requested and received additional staff in FY 2011-2012. Most of these positions were added to the UIC program to provide additional staff to conduct an adequate UIC project application review. Several PYs were used to form an internal monitoring and compliance group to dig deeper into the UIC project files to provide a more refined evaluation of the Division's internal adherence to UIC requirements. Once established, the Monitoring and Compliance Group began an assessment of the Division's activities in District 1 (Los Angeles Basin) regarding past and current work regarding UIC project approvals, area of review and zone of endangerment assessments, project monitoring and annual reviews.

To meet the objectives listed in the Letter of Expectations, Division management executed an internal strategy to explain and train staff regarding the requirements for an UIC project approval, and how existing projects were to be reviewed, remediated and monitored to move UIC projects to full compliance.

As these activities were underway, Division management recognized the need to address the emergence of cyclic steam enhanced oil recovery as not only a rapidly evolving technology but one that was being employed to produce a major fraction of the state's oil. Further, the Division set in motion steps to deal with the mismatch between existing regulations and the realities in the state's oilfields. Of greatest concern was cyclic steam production from shallow diatomite formations as this type of production was rapidly emerging, and the state's regulations were inadequate to properly regulate these activities and ensure protection of USDWs.

#### **Moving Forward and UIC Assessment**

Even though there has been consistent recognition by several top leaders within the Division that the UIC program has had significant deficiencies, Division plans and actions for UIC improvement have been less effective than needs demand. In part, the mismatch between plan objectives and results have been caused by numerous management changes. Furthermore, it was not fully understood that fundamental problems with the lack of consistent business processes, poor record-keeping and the lack of modern data management tools were only some of the root causes of the Division's lack of performance in the UIC program. Hence, until recently, a coherent plan addressing broad, fundamental foundational problems was not developed. This spring, with the strong support of the Brown administration, the Division requested and received 23 additional positions to address deficiencies in a number of areas – capacity in program leadership, monitoring and compliance, data management and geographic information systems, emerging technologies, and environmental review. Furthermore, as part of the overall plan, the Division requested and received funding for a modern data management system designed for the oil and gas regulatory environment. Further changes will be forthcoming in the weeks ahead to better align the Division for significant performance improvements.

The Division has already started its UIC program evaluation and will continue the following efforts:

- Identifying gaps in UIC Program compliance and develop a corrective action plan
- Hiring qualified personnel to fill retirement and new position vacancies
- Providing technical and regulatory training for UIC staff
- · Increasing management oversight of UIC staff
- Increasing accountability for technical work
- Conducting outreach to the public regarding state and federal mandates
- Conducting outreach to the oil and gas industry to raise awareness of changes in Division regulatory approaches and monitoring
- Pursuing and implementing electronic data systems development

California is moving forward to meet the changing regulatory imperatives with respect to technology, demographics, and more aggressive oversight of oil and gas production. To reiterate, the target is to evolve the Division to a modern, efficient, collaborative, science-driven agency that intelligently and consistently regulates State oil and gas activities using modern field tools integrated with advanced data management systems that allow for oversight of a greater number of activities. Safety and continuous training and improvement will become integrated cultural norms. The Division will be much better connected with oil and gas-related research activities in industry, academia, and national laboratories so that it can see regulatory challenges coming in advance and apply regulations from an elevated platform of understanding. The Division will perform its duties with integrated collaboration of other State agencies to reduce the environmental impact of oil and gas development. Internal monitoring and compliance will be routine and fully integrated with all that is done so that Division performance can

be measured objectively. The Division will be able to support all stakeholder groups because it will be paperless and have instant access to data and information. Hence stakeholder groups will be able to routinely observe Division activities and retrieve information of interest. The Division will have more effective communications capabilities and be more comfortable engaging the constellation of stakeholder groups.

Such profound organizational renewal will consume several years and require constant, focused attention. This work plan is an important initial piece of that renewal. The UIC plan is designed to strengthen the current UIC Program through new regulations, consistent, ongoing training, enhanced compliance oversight, and an evaluation of existing projects and UIC operations.

#### **Assessment by Monitoring and Compliance Unit**

The Division has conducted a partial assessment of the Division UIC Program by sampling and reviewing program activities and compliance oversight in one of its District offices. In the development of the assessment, the Division considered the following concerns to help develop a priority list:

- Risk to the public
- Risk to health and safety
- Risk to property
- Risk to natural resources
- Risk of litigation

Based upon known conditions at the time of the assessment, the injection projects located in the Cypress District (Division – District 1) appeared to have the highest priority. The District has around 800 injection projects, which includes over 2,000 injection wells.

The assessment was designed to give greater insight into the range of shortcomings in the Division's UIC program. The UIC program standards that should be used are listed in both California's Primacy application and the federal regulations associated with the Safe Drinking Water Act and Class II injection wells. The assessment has:

- Evaluated a representative sampling of old projects that are in fields that were discovered in the 1930's and 1940's to determine if appropriate Area of Reviews (AOR) were completed and to determine if possible conduits for the injection fluid are present
- Evaluated a representative sampling of recent projects to determine if appropriate AORs were completed and to determine if possible conduits for injection fluid are present
- Evaluated a representative sampling of the records for annual project reviews to determine if they were performed and documented adequately to determine if the project is in compliance with the project approval

- Evaluated a representative sampling of the Division's UIC monitoring program to determine if adequate Mechanical Integrity Testing (MIT) surveys were conducted, evaluated, and documented to ensure mechanical integrity of the injection wells
- Evaluated a representative sampling of the Division's UIC monitoring program to determine if the Maximum Allowable Surface Pressures (MASP) are determined correctly and monitored to ensure compliance with the project approval
- Evaluated if the Division's UIC staff are appropriately educated and trained and have the necessary tools to enforce the Safe Drinking Water Act in regards to Class II wells
- Evaluated if the Division has enough staff and resources to adequately enforce the Safe Drinking Water Act in regards to Class II wells

A draft report that lists the results of the assessment in our Cypress district office has been prepared and is under final administration review.

#### **Bonding**

The State has already addressed some of the financial responsibility requirements. Effective January 1, 2014, the State has increased its bonding amounts to address the rising costs to remediate problem wells that become the responsibility of the State. These changes also affect the number of wells that may be covered by a blanket bond. What is not clear, pending further review, is the magnitude of the state's financial liabilities and whether the incremental changes heretofore are sufficient to address long-term needs.

#### **DIVISION'S NEXT STEPS**

Individual Project Evaluation

The Division will undertake improvements to its administration of the UIC Program through a series of actions including increasing program leadership talent, enhancing field monitoring of compliance with regulations, a series of rulemakings on priority topics, and a project-by-project review of each UIC project to assess the status of the project with respect to compliance with UIC regulations, testing requirements and adherence to limitations placed on the project in project approval letters. This plan will be informed based upon the findings of the partial assessment of the UIC program already conducted. The Division will take the following steps to ensure all injection projects are in compliance with State law and the Primacy agreement with the US EPA:

 District staff will review all of the active injection projects in the State and determine what, if any, data are missing to fully evaluate the injection project and ensure the protection of Underground Sources of Drinking Water (USDW). Any data that need to be updated because of changes or modifications to the original approval, will be identified and collected, and the project files organized and

- prepared to meet two goals: improved, consistent regulatory oversight and efficient uploading of project data into the coming new data management system.
- 2. As this project-by-project review is underway, Division staff will meet with operators to discuss the list of deficiencies and develop a compliance schedule for all issues. Operators will be given no more than 6-12 months to supply the Division with the missing or updated data. Depending on the data requests, this timeline may be greatly reduced. Based on the project-by-project review, projects could be terminated or modified.
- Division staff will evaluate the data submitted and require operators to make changes to ensure the project is still viable. Projects will be modified or cancelled based on this analysis.
- 4. All projects will be evaluated by the District office and sent to Sacramento for review and concurrence by the program director prior to being approved.
- 5. Projects may require a new Project Approval Letter (PAL) with additional conditions and/or reporting requirements to ensure compliance.
- 6. All projects will be reviewed to assess containment of injection fluids. The Division will work closely with the State Water Quality Control Board on the evaluation of fluid containment and the adequacy of the required zone of endangering influence and area of review.
- 7. All injection data will be entered or verified in the State's databases. Because existing databases may not have the capacity to manage all the data required, the Division will implement a temporary database until the Division's data management system is developed and implemented.
- 8. All required mechanical integrity tests will be confirmed and verified.
- 9. Once every year thereafter, the projects will be evaluated to ensure the projects are operated in compliance with the PAL and all testing and monitoring requirements have been met in compliance with UIC regulations.

#### Project-by-Project Review Schedule

The project-by-project review process will be time consuming and demand significant investment if staff time. In the Cypress and Bakersfield districts, this effort will be very significant. Even though with the implementation of the Letter of Expectations, project applications and project files have improved, many of the injection projects were evaluated and approved under a less stringent process. Many of the Districts have had District policies in place that fell short of directives in the primacy application, statutes, and regulations. The time to complete this review will vary based upon the following:

- Number of projects in each District
- Number of injection wells in the project
- Number of wells within the AOR (project area)
- Amount and type of data missing from the project file
- Current status of the project

Division leadership expects that a review of this depth could require as much as a week (5 working days) to evaluate what is missing from a project file. Such a review can be complicated and complex since the data provided needs to be relevant and accurate, and requires comparison with the project application.

All projects are not equal in size or complexity, and based upon the project status and number of injection projects by District, the following is an estimate of time needed for initial review to evaluate existing data, identify gaps and the develop a list of compliance deficiencies:

District 1 (Cypress)
Number of projects: 817 (X 40 hours) = 32,680 hours

District 2 (Ventura)
Number of projects: 322 (X 40 hours) = 12,880 hours

District 3 (Orcutt)
Number of projects: 255 (X 40 hours) = 10,200 hours

District 4 (Bakersfield)
Number of projects: 1342 (X 40 hours) = 53,680 hours

District 5 (Coalinga)
Number of projects: 195 (X 40 hours) = 7,800 hours

(X 40 Hodis) = 1,000 Hodis

District 6 (Sacramento)

Number of projects: 43 (X 40 hours) = 1,720 hours

The Division is mindful that review of all projects will not consume a full 40 hours. Some projects are no longer active, so the District staff will prioritize the projects based upon

Attachment 2: Plan for Class II Program Improvements

**8 |** Page

their status. Based upon these numbers it is estimated to take anywhere from six to 18 months to complete this first phase. Phase II -- developing a compliance schedule required of operators and certifying the completion of requirements-- will consume, in total, approximately an additional 12-18 months. Therefore, the overall time to fully complete the project review, certify remedial work, and move the program into full regulatory compliance is estimated to be three years.

The Division anticipates that the review and compliance process can be completed in different districts on different schedules. Beginning October 1, 2015, the Division has developed the following schedule:

Districts 3 and 6, review complete within 7 months, compliance certification within 18 months (18 months start to finish);

Districts 2 and 5, review complete in 9 months, compliance certification in 24 months (24 months total).

District 1, review complete in 10 months, compliance certification in 28 months (28 months total).

District 4, review complete in 16 months, compliance certification in 36 months (36 months total)

A very significant unknown in this review will be the amount of time needed for joint Division and Water Board assessment and validation of containment of injected fluids. Furthermore, demands on staff time for aquifer exemption data review and preparation for the implementation of the new data management system will be significant and will have to be orchestrated to meet these timelines. Once an initial assessment of file status in each of the Districts is complete, the Division can develop a more refined assessment of schedule.

#### Aquifer Exemptions

The Division continues to evaluate wells that have been permitted to inject into non-exempt aquifers, according to the compliance schedule agreed upon by the Division, State Water Board, and US EPA. The Division, working with the State Water Board, is continuing to evaluate potential impacts to water supply wells and, where precautionary measures are needed, ordering wells to cease injection if there is a potential impact to any water supply well. In addition to the well evaluation, the Division and State Water Board are working with operators to obtain additional data on aquifers to determine if the State will pursue aquifer exemption applications to the US EPA. The State continues to meet its obligations to the compliance schedule and acknowledges that a failure to receive approval from the US EPA on proposed aquifer exemptions will result in additional injection well closures.

#### Staffing

As noted above, the Division has recently received 23 additional positions to augment the Division's program. Ten positions will be deployed to the district offices to enhance field presence and the review of UIC projects. Five positions will be added to the GIS/Data Management Unit to ensure data quality and support to the district staff evaluating UIC project applications and reviews. Three positions will be added to the California Environmental Quality Act (CEQA) Unit to ensure compliance with project approvals and environmental reviews associated with the approvals. Four positions will be added to the Monitoring and Compliance Unit, which will increase capacity to the current Monitoring and Compliance Unit to ensure there is consistency throughout the Division and that all districts are fully implementing the UIC program. We have also added one position to the legal staff to assist with rulemakings, litigation, and other legal issues associated to UIC issues.

The Division is also assessing its organizational structure, workload, and supervisory oversight requirements of the organization and is preparing to make adjustments to be more effective and to better assimilate the additional staff. These adjustments, based upon identified priorities, will be announced soon.

### Compliance Monitoring

This work plan includes utilizing the Division's Monitor and Compliance Unit to verify District staff are following statutes, regulations, and policies in the regulating of the UIC projects. This unit is separate from the UIC Program and therefore can provide objective analysis of the adequacies of the UIC Program improvements. This unit is comprised of one Senior Oil and Gas Engineer to oversee the unit, seven Engineers, and one Associate Government Program Analyst. This team will provide the necessary resources to assist with the improvement plan implementation and execution, and then continued monitoring to ensure Division statutes, regulations, and policies are followed. This unit is providing feedback to the Technical Services Manager, UIC Program Manager, and the Chief Deputy to ensure accountability.

#### Training

The Division is seeking a Technical Training Coordinator to evaluate training needs of the Division's technical staff. As we move to fill this position, the Division is also moving to put in place training contracts and training requirements for staff to complete, prior to going into the field and evaluating UIC project applications. The Division is also in the process of developing a training plan that clearly outlines the necessary training requirements for each level of engineer as well as a list of skills, knowledge, and abilities for each level of engineer. This plan is also expected to be ready by autumn, 2015.

In addition to specific training courses, the Division will continue its meetings of engineers in the Districts. The Division has had two such meetings in the last year.

Attachment 2: Plan for Class II Program Improvements

10 | Page

These meetings are designed to develop team work and share important information regarding different aspects of the work district engineers perform. They provide a forum to share findings regarding investigations of injection activities the Division has undertaken and provide guidance as to how to monitor and identify issues before problems occur.

#### **Business Process**

The Division lacks clear and consistent business process. To deal with this challenge, the Division has contracted for assistance with:

- 1. Identification of the various permitting processes throughout the Division
- 2. Identification of common relevant steps in each the process
- 3. Recommendations of statewide processes for our permitting

Along the way, the contract will ensure that legislative mandates are being captured in our existing processes. Much of the work done for this will also contribute to essential preparations for the implementation of our data management project.

Phase 1 of the contract will require 90 days. The contractor is now traveling to District offices to interview employees who have a part of the UIC program.

#### Data Management System

The Division has already begun working with the California Department of Technology to evaluate our current systems and to develop a plan to meet the Division's future data management needs. This plan will include looking at a data management system that captures all the required data and a method for either the Division to push data to an US EPA-wide data management system or a method for EPA to download data. The State employs a "Stage/Gate" model process to assess business needs and processes and develop deliverables and project completion schedules. The entire process of assessment to delivery of a complete system could take 3-4 years including the uploading of legacy data.

#### Rulemaking

The Division has identified an ambitious list of regulatory goals to be accomplished by rulemaking action. This list of regulatory goals is based on the Division's own evaluation of its UIC Program, concerns raised in the review prepared by the Horsley Witten Group, input from stakeholders, and input from other regulatory agencies. In addition, these regulatory goals dovetail with issues related to the UIC Program that were identified by the California Council on Science and Technology in the independent

scientific assessment of well stimulation treatments in California that it conducted pursuant to Senate Bill 4 (Pavley 2013).

These regulatory goals each relate to the Division's UIC Program, but some issues – such as well construction standards and idle well management – are actually broader in scope than just injection regulation. Because these rulemaking goals are likely to be more than could be effectively addressed at one time, the Division will undertake its rulemaking efforts around these goals in two phases. The regulatory goals to be addressed in these two phases of rulemaking are as follows:

#### Phase 1

- Clarify standards for ensuring zonal isolation of injection projects
- Expressly define the quality of water to be protected when constructing wells
- Codify best practices for well construction
- Establish permitting and regulatory requirements specific to cyclic steam operations
- Establish requirements specific to cyclic steam in diatomite, including a regulatory framework for responding to surface expressions and clarification regarding injection above fracture gradient
- Clarifying process and standards for establishing maximum allowable surface pressure for injection operations

#### Phase 2

- Codify requirements for ongoing project review
- Establish requirements for securing idle wells and standards for well abandonment
- Elaborate on existing idle well testing requirements

Generally, these rulemaking goals will be accomplished through a process of (1) identifying interested parties and engaging with stakeholders to solicit concerns and suggestions; (2) drafting proposed regulations and informally soliciting input on the draft regulations; and then (3) commencing formal rulemaking to adopt proposed regulations.

The Division has already started this process for Phase 1 of its rulemaking effort. The Division has circulated a notice identifying the Phase1 regulatory goals and encouraging people to identify themselves as interested parties for the rulemaking effort. In the near future, the Division will be sending notice to interested parties of workshops to be conducted this fall throughout the state, in order to provide an opportunity to provide

input on how to best accomplish the regulatory goals identified. The Division's goal is to informally circulate draft regulations in November 2015, commence formal rulemaking in January 2016, and complete the rulemaking process for the Phase 1 rulemaking effort by winter of 2016.

Although the Division has already begun giving consideration to Phase 2 regulatory goals, the Division will not begin working in earnest to pursue the Phase 2 rulemaking effort until formal rulemaking for the Phase 1 rulemaking effort is near completion. Accordingly, the Division estimates that the Phase 2 rulemaking effort will not begin until fall of 2016, and will not be completed until winter of 2017.

#### Conclusion

The job of meeting the many goals laid out here is indeed a substantial one. But with the continued support and effort of those involved, doing the job well will result in a modern and responsive regulatory unit that is able to meet the challenge of helping to shepherd our oil and gas resources in a way that will, to the greatest extent possible, both protect public health and the environment and maintain California's significant oil production economy.

# Attachment 3: Public Participation Process For Aquifer Exemption Proposals

The purpose of this document is to explain the public participation process that the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (Division) will follow before submitting an aquifer exemption proposal to the US Environmental Protection Agency (U.S. EPA). The Division will not submit an aquifer exemption proposal to U.S. EPA without concurrence from the State Water Board and the appropriate Regional Water Quality Control Board (collectively Water Boards) that the proposal is appropriate, and the Division will not submit a proposal for public comment unless the Division and the Water Boards agree that the proposal merits consideration.

#### Public Notice and Comment

- <u>Timing</u>. Public notice and opportunity to comment will be provided after the Division and the Water Boards make an initial determination to request U.S. EPA approval of a new aquifer exemption, but before any final proposal is submitted to U.S. EPA.
- Newspaper Publication. The Division will publish notice of proposed aquifer exemptions in at least one newspaper. The most appropriate newspaper will be determined on a case-by-case basis, but generally will be the most widely-circulated, daily-issue newspaper in the county where the aquifer is located. Notice may be published in a second newspaper, if deemed necessary to target a wider audience or more local community. All notices will be published for three consecutive days, beginning (but not necessarily ending) on a weekday.
- Length of Notice and Comment Period. The Division will accept public comment for a period of at least 30 days beginning on the first day notice is published in the newspaper. If substantial changes are made to the proposed exemption after the close of the initial notice and comment period, the Division will reopen a supplemental, 15-day notice and comment period beginning on the first day the supplemental notice is published in the newspaper.
- <u>Website</u>. The Division will establish a webpage within its current website to hold all notices, information submitted in support of exemptions, public comments, and other materials on which the Division relies. The notices will direct readers to the webpage for more information, which will more fully inform the public and enable a meaningful opportunity to comment.
- <u>List Serve</u>. The webpage for aquifer exemptions will allow individuals to join a list serve for receiving email notification of all future aquifer

- exemption proposals. Email notification will be sent on the same day notice is published in the newspaper, or as soon as possible thereafter.
- Outreach. On the same day notice is published in the newspaper, or as soon as possible thereafter, the Division will email or mail notice to the following:
  - Director of the Water Management Division, U.S. EPA Region IX;
  - Chairperson of the State Water Resources Control Board;
  - Chairperson of the Regional Water Quality Control Board(s) with jurisdiction over the area in which the aquifer is located;
  - The Board of Supervisors of the county(s) in which the aquifer is located, and any other local officials identified as likely to be interested;
  - State Senators in the following committees: Agriculture; Energy, Utilities and Communications; Environmental Quality; Natural Resources and Water;
  - State Assembly Members in the following committees: Agriculture;
     Natural Resources; Water, Parks & Wildlife; and
  - Industry associations and non-governmental organizations identified as likely to be interested;

#### Public Comment Hearings

- Schedule and Notice. A joint public comment hearing will be held with a designee from the State Water Board for the purpose of providing an opportunity for people to provide oral comments. The initial notices for a proposed aquifer exemption will specify the date of the hearing date, which will always be at least 30 days from the date of the notice.
- <u>Location</u>. Hearings will be held at a location convenient for the parties involved or in Sacramento.
- Consolidation. The Division and State Water Board will set aside one day every month (or every other month, depending on the rate of proposals under review) for holding a public hearing on proposed aquifer exemptions. Several aquifer exemption proposals will normally be considered at each hearing, with each proposal allocated a separate time slot. The number of exemption proposals at issue in a hearing will depend on readiness of the proposals and their relative complexity.
- Requests for U.S. EPA Participation. The Division and State Water Board may elect to request U.S. EPA's participation at the hearing. Requests for

Attachment 3, Public Participation Process For Aquifer Exemption Proposals

- U.S. EPA participation will be made at least 10 days prior to the date of the hearing.
- Conduct. Public hearings will be conducted as follows:
  - Division staff will provide a brief introduction regarding each aquifer exemption;
  - The purpose of the public comment hearings is to receive public input – the Division and State Water Board will receive public comments but will not necessarily answer questions or debate issues;
  - All attendees will be provided an opportunity to provide oral or written statements, though the Division and State Water Board may impose reasonable limitations on oral presentations;
  - Hearings will be recorded by an audio/video recording device, or by a stenographer; and
  - If an attendance list or similar document is posted or circulated at the hearing, the document will state that signing-in is voluntary and that all persons may attend regardless of whether they sign-in.

#### Outcome

- Notice of Substantial Changes. As noted above, the Division will reopen a 15-day supplemental notice and comment period for substantial changes made to the proposed exemption following close of the initial comment period.
- Decision and Response to Comments. If the Division and the Water Boards elect to submit an aquifer exemption proposal to U.S. EPA, it will prepare a document that (1) announces the decision, (2) provides a concise statement of the basis for the decision, and (3) summarizes the substantive comments received (including oral comments received at a hearing) and the disposition of those comments. This document will be included in the submittal to U.S. EPA
- Submission to U.S. EPA. In the unlikely event it takes the Division longer than one year from the date of initial notice to submit an aquifer exemption to U.S. EPA, the Division will consider whether there are any changed circumstances that may reasonably require a new round of notice and comment

# EXHIBIT B

#### UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

# REGION IX 75 Hawthorne Street San Francisco, CA 94105-3901

April 19, 2016

Kenneth Harris, Jr.
State Oil and Gas Commissioner
Division of Oil, Gas and Geothermal Resources (DOGGR)
801 K Street
Sacramento, CA 95814

Dear Mr. Harris,

The United States Environmental Protection Agency, Region 9 (EPA) is in receipt of your February 8, 2016 letter transmitting the State's request for an expansion of the aquifer exemption (AE) for the Dollie Sands of the Pismo Formation in the Arroyo Grande oil field. Subsequent to the State's submittal, we had an opportunity to meet with members of your Inland District and Headquarters staff, the State Water Resources Control Board (State Water Board) and the Central Coast Regional Water Quality Control Board (RWQCB) to discuss the application. Based on EPA's review of the application, and our recent discussions, we have determined that additional information is necessary regarding the aquifer exemption request.

EPA evaluates aquifer exemption requests based on criteria in the Agency's Underground Injection Control regulations at 40 CFR section 146.4. These criteria include that the aquifer, or a portion thereof, proposed for exemption 1) does not currently serve as a source of drinking water, and 2) cannot now and will not in the future serve as a source of drinking water. As we discussed with your staff and the State and Regional Boards, EPA requires additional information pertaining to the demonstration that the portion of the Pismo Formation proposed for exemption does not currently serve as a source of drinking water. In addition, we need further clarification of the basis for the specific exemption boundaries proposed and more technical information demonstrating that injected fluids will not flow beyond these proposed boundaries. A more thorough description of the information EPA needs to further consider the proposed AE is contained in the Enclosure to this letter.

As you proceed in gathering and analyzing additional information to support this request, particularly regarding the drinking water wells in the area, EPA is interested in discussing the methodology for this data collection. We would be happy to schedule a discussion of this topic at one of our upcoming monthly UIC meetings.

Printed on 100% Postconsumer Recycled Paper, Process Chloring Free.

If you have any questions about this request, please contact me at (415) 972-3834, or contact David Albright in our Drinking Water Protection Section at (415) 972-3971.

Sincerely,

Michael Montgomery

Assistant Direction, Water Division

Lisa Horowitz McCann, Regional Water Quality Control Board, Central Coast Region

## **ENCLOSURE**

# Arroyo Grande Aquifer Exemption Application

Issue/Comment			Additional Information Requested
HYDRAULIC ISOLATION			
1.	While the information in the application provides a general characterization of the injection zone, there is insufficient information to demonstrate hydraulic isolation based on facies changes or other changes in permeability and to support the proposed AE boundaries. Additional technical information is needed to demonstrate hydraulic isolation of the aquifer (by the fault, facies change, and tar seals), justify the specific boundaries of the expanded exemption area, and demonstrate that injected fluids will not flow beyond these boundaries. Specifics regarding the required additional technical information is described below:		Please provide any additional data, analyses, or technical justification to demonstrate hydraulic isolation of the Dollie Sands from the surrounding aquifers. Also please clarify the technical basis for the proposed boundaries, and provide any additional technical justification to demonstrate that injected fluids will not flow beyond the proposed boundaries.
a.	The Arroyo Grande fault to the north. The application does not provide any information on the transmissivity, rock properties, or other relevant characteristics of the fault. If the fault is not, in and of itself, a barrier to fluid migration (which cannot be determined from the information provided), it is possible that flow could occur across the northern boundary of the aquifer proposed for exemption, as cross sections A-A', D-D', and F-F' show the presence of the Edna/Dollie (in yellow) on either side of the fault.	a.	Please provide any information on the transmissivity, rock properties, or other relevant characteristics of the fault to better demonstrate its geological properties and to clarify the extent to which the fault is a barrier to fluid migration.
b.	Facies change from the Edna/Dollie to the low-permeability Miguelito to the south. The facies change appears to be supported by cross sections A-A', C-C', and E-E'. However, none of the provided cross sections covers the southwestern area near the original aquifer exemption boundary, where the Pismo formation begins to extend past the edge of the proposed expanded exemption boundary.	b.	Please provide as much information as possible to demonstrate that the facies change acts as a barrier to fluid movement and to delineate/justify the proposed southwestern exemption boundary.
c.	Lateral tar seal and/or loss of permeability to the west and east. Cross-section B-B' shows the Edna/Dollie extending across the western boundary of the zone to be exempted with no facies change or other apparent barrier to fluid migration. The application does not provide porosity, permeability, or other data (e.g., data about the continuity of low permeability zones) supporting the delineation of this boundary to the west. According to the cross section, the tar seal (for which no permeability or other information is provided)	c.	Please provide as much information as possible to demonstrate the characteristics of the tar seals to act as barriers to fluid movement and to delineate/justify the proposed western and eastern exemption boundaries.

Issue/Comment	<b>Additional Information Requested</b>
occurs approximately 500 ft below ground surface at the western boundary of the proposed exemption, while the Edna/Dollie extends to about 1,250 ft below ground surface. A similar scenario is shown at the eastern boundary. The application does not provide permeability data or other information to demonstrate that there is a geologic barrier to fluid flow in these areas.	· · · ·
be no upper confining zone because the proposed exempted area extends to the surface. Per Section 2 of the application and the cross-sections in Appendix A, the lower confining zone is the low-permeability (1.7 mD) Miguelito Member of the	Please provide any additional data, analyses, or technical justification to address the lower hydraulic isolation of the Dollie Sands from surrounding aquifers in light of the inconsistent distribution of and discontinuities in the lower confining zone (Miguelito Member of the Pismo Formation).
3. Information regarding the hydraulic regime is not sufficient, as described more fully below:	
a. The application contains a basic hydraulic analysis assessing fluid containment, which evaluates the likelihood of fluid passing a certain elevation (a "spill point") based on subsurface pressures. The assessment appears to assume a hydraulically isolated injection zone (i.e., no-flow boundary conditions), which may not be appropriate for the site. The application does not include a technical justification for selecting the elevation of 275 ft as the spill point in the hydraulic analysis. Also, there is no explanation of how or whether this elevation can be uniformly applied at all boundaries of the exempted area, nor any pressure data for that elevation.	a. Please provide technical justification for selecting the spill point elevation, an explanation of whether it can be uniformly applied at all boundaries, and any available pressure data.
<ul> <li>b. Regional groundwater patterns are characterized in Section 4 and Appendix G</li> <li>1-1 of the application. However, the application does not provide site-specific directional groundwater flow information, stating instead that the zone proposed for exemption is hydraulically isolated from the surrounding area</li> </ul>	<ul> <li>As part of the analysis needed to fully evaluate the aquifer proposed for exemption, please provide site- specific groundwater flow information (direction and speed).</li> </ul>
c. The analysis does not appear to consider any effects of existing or future saturation in the aquifer (the pressure response in the reservoir is a direct function of saturation levels, especially in closed domains as is assumed by this analysis) or of buoyancy-driven fluid movement.	c. Please explain how the analysis includes the consideration of the effects of existing or future saturation in the aquifer.

Issue/Comment	Additional Information Requested
d. The analysis is supplemented by qualitative descriptions of certain operational factors (injection/production volumes and dewatering) that would contribute to hydraulic containment, but no supporting data are provided for these factors.	d. Please provide any supporting data on the operationa factors, especially any that could contribute to hydraulic containment of fluids within the proposed exempted area.
CURRENT SOURCE ANALYSIS	
within 1 mile of the oil field, including a review of well completion reports and a walking survey. The Statement of Basis indicates that the operator worked with the state and regional water boards during this process. The aquifer exemption package states that no drinking water wells were identified within the proposed area to be exempted. However, to determine whether the aquifer proposed for exemption is a current source of drinking water, it is not sufficient to demonstrate that there are no drinking water wells within the areal boundaries of the proposed exempted aquifer. It is also necessary to identify and evaluate all public and private drinking water wells that are outside the areal boundary of the proposed exempt area, but which may draw	Please provide details (including a map) of all current public and private drinking water wells that are outside the areal boundary of the proposed exempt area but which may draw water from the aquifer, along with an analysis of the capture zone for each of the identified wells.  Please provide the purpose of each of the wells in Table A-1 o Appendix G 1-1, specifically clarifying if the well is a drinking water supply well, and provide any available information on these wells, including the age of the wells/expected life, well owner, use/production rates, capture zones, and screened depths.

the water is used for irrigation, livestock, or other purposes.

	Issue/Comment	Additional Information Requested
5.	The application includes an inventory of water supply wells within a 1-mile radius of the Arroyo Grande oil field boundary, however, no specific rationale is provided for choosing a 1-mile radius for consideration of water supply wells. Also, because the oilfield boundary is not the same as the proposed AE boundary, there are locations where the edge of the search area is less than 1 mile from the proposed AE boundary. This is shown in Figure 1 of the Statement of Basis ("Locations of Water Supply Wells within the Vicinity of the Proposed Aquifer Exemption Boundary"), particularly on the eastern and southern edges of the proposed AE.	Please provide the rationale for determining the size of the area selected for the evaluation of nearby water supply wells, justifying that the selected area is sufficient to identify all wells that may draw water from the aquifer proposed for exemption during their lifetimes.
6.	Several public comments (e.g., 0007-27, 0011-4, and 0073-2) suggest that the well inventory is incomplete and identify wells that may have been missed during the well survey. Also, in its response to public comment 0005-17/0005-26/0005-27, DOGGR (global comment) indicated that certain wells, screened in both the Miguelito and the Edna, likely draw solely from the Edna. Based on the available information, this appears to be a reasonable statement. However, the response goes on to say, "The Edna is not hydraulically connected to the oil bearing Dollie sandstone inside the proposed aquifer exemption area." This statement appears to contradict other statements in the aquifer exemption package, which consider the Edna and the Dollie to be the same formation (for example, refer to Section 4.1, page 14 of the application).	Please provide any available information on the wells mentioned in the public comments. If these wells are not pertinent to the AE request/analysis, please explain this in your response. In addition, please address the discussion of the Edna and Dollie Formations to clarify whether they are hydraulically connected and whether they are indeed the same formation.
	OTHER	
7.	Although maps are provided in Figure 1-1, Figure 2-1, and Appendix A 4-1 of the application, all locational information is provided in T/S/R format. There are no specific three-dimensional coordinates provided to clearly define the boundaries of the proposed exempted area. Three dimensional coordinates (e.g., provided in GIS files) will clearly delineate the proposed boundary and support the need to make AE information available to the public.	Please provide the three-dimensional coordinates that delineate the proposed exempted area.
